Make sure you are confidently connected online

Looking out for you

24/7 proactive service
monitoring and support

Supporting your ability to flex and scale

Choose from a range of speeds
and options, including burstable
bandwidth, to suit your needs

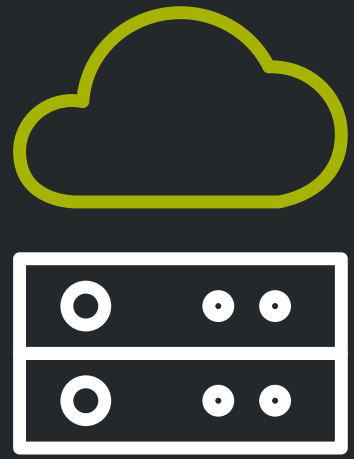

Keeping you in control

Performance reports so you're in
the know

Typical use case examples

Vodafone DIA is ideally suited
to bandwidth-hungry organisations:

Moving more
services
to the cloud

Running
time-critical
communications,
such as voice
or video

Looking for a back
up solution

Hosting own
website

Wanting cost-
effective multi-site
connectivity

Why Vodafone?

Not all Internet services are created equal

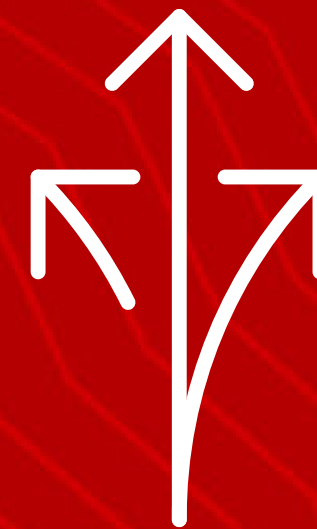

Greater peace of mind

Take advantage of a direct connection to one of the largest Internet backbones in the world.*

Our truly global network means we help customers reach the online content they need with a more predictable performance and better end-user experience.

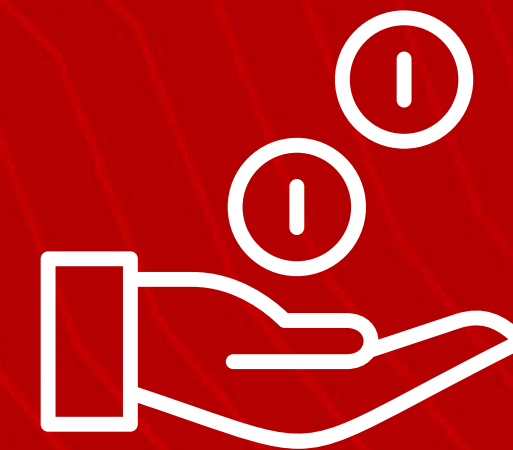

This is achieved through private ISP peering relationships and direct high-bandwidth connections with Google, Microsoft and Amazon to make sure customer data gets to where it needs to, with fewer hops to other networks.

Even better outcomes for business success

Make the most of the ability to choose what's best for your business.

Better support business success by prioritising one type of traffic over others at a network level e.g. ensure voice and video traffic gets the best end-user experience.

Better value

Benefit from a more cost effective way to access our world-class service.

Not only do we have our own fibre network, but we also partner with Openreach, Virgin and CityFibre to help keep the cost of access competitive.

Together we can
