

Complete control of connectivity, wherever your business takes you

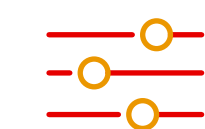

Vodafone Smart Connectivity

With so many sectors increasingly reliant on high-speed connectivity, our Smart Hubs deliver fast, reliable and secure access whenever you need it.

Smart Hubs have been specifically engineered for specialist use cases, enabling connectivity even in remote areas where traditional broadband isn't an option. Designed to be plug-and-play, you can be up and running in minutes, rather than days.

So, whether you need temporary connectivity on a construction site, something that can withstand the elements, or an in-vehicle solution that keeps teams connected on the road, we've got a Smart Hub that gives you complete control.

The Smart Hub enables you to:

 **Tailor it to your needs.**
Select the right Smart Hub for your requirements and a data plan to match.

 **Be in control.**
Stay two steps ahead of your team's usage with our digital dashboard, alongside the ease of billing with multiple Smart Hubs integrated into one data pool.

 **Peace of mind.**
For peace of mind and more challenging use cases, we provide a professionally-managed install service too.

 **Keep things simple.**
Ensure a reliable connection with high levels of coverage and minimum levels of fuss.

 **Get working fast.**
You'll be online in a matter of minutes, not days, from the time of purchase.

Let's put this into context by looking at your priorities, practical use cases, and how Smart Connectivity products could be of benefit by solving your network challenges...

SECTOR: CONSTRUCTION

1

Your priority

Getting a new construction site connected so that multiple different users (such as site managers, architects, tradespeople and project managers) can collaborate and access vital project information.

Typical pain points:

- Getting new fixed line connectivity to a construction site can take weeks.
- “Hotspotting” data from a mobile phone is inconsistent and expensive – it’s not a viable long-term solution.
- Large data volumes for multiple users who are accessing complex, essential plans.
- Connecting multiple on-site devices, not just browsing.

How we can help

Giving you complete control of connectivity at new sites, with a **Rapid Deployment Smart Hub** delivered to you at speed that:

- Delivers fast and reliable connectivity to a new site, quickly.
- Provides stable connectivity through a mains-powered router, using a high-gain antenna to attain the best possible signal and speed.
- Enables full control and visibility of usage with a digital dashboard and data pooling (with allowances of up to 1TB).
- Complete flexibility of contracts, from 30 days to 24 months.

Outcome

Complete control of connectivity to wherever you need it, quickly and in almost any location.

SECTOR: RETAIL AND EVENTS

2

Your priority

Temporary sites don’t often offer internet access. Whether you’re at a festival or setting up a pop-up shop in a market, you need to stay connected to offer the best customer experience and to keep in contact with suppliers, team members and other third-parties.

Typical pain points:

- Unpredictable infrastructure on-site when every location is different.
- Requirement for short-term solutions that don’t come with larger contracts, with time online perhaps only lasting days or weeks.
- The need to offer eCommerce services and card payments, which require internet connectivity.
- “Hotspotting” data from a mobile phone is inconsistent and expensive – not a long-term solution.

How we can help

Give you complete control of connectivity at temporary sites, with a **Rapid Deployment Smart Hub** delivered to you at speed that:

- Gets fast and reliable connectivity to a new site, quickly.
- Provides stable connectivity through a mains-powered router, using a high-gain antenna to attain the best possible signal and speed.
- Enables full control and visibility of usage with a digital dashboard and data pooling (with allowances of up to 1TB).
- Complete flexibility of contracts, from 30 days to 24 months.

Outcome

Complete control of connectivity on-site, wherever you need it, quickly and in almost any location

What other scenarios and sectors is Smart Hub relevant to?

Many other scenarios and sectors can benefit from the use of Smart Hub technology, powered by Vodafone Business. Including:

Temporary offices

Events
