

A rapid, easy-to-install one-piece HD camera

# Gain maximum visibility with compact, redeployable CCTV units.

vodafone  
business

# Low maintenance meets high performance.

**Traditional CCTV cameras can pose several challenges during their physical setup, from excessive cabling to complex installations. But what if we told you there's a one-piece, lightweight and compact camera — ideal as a temporary or semi-permanent security solution?**

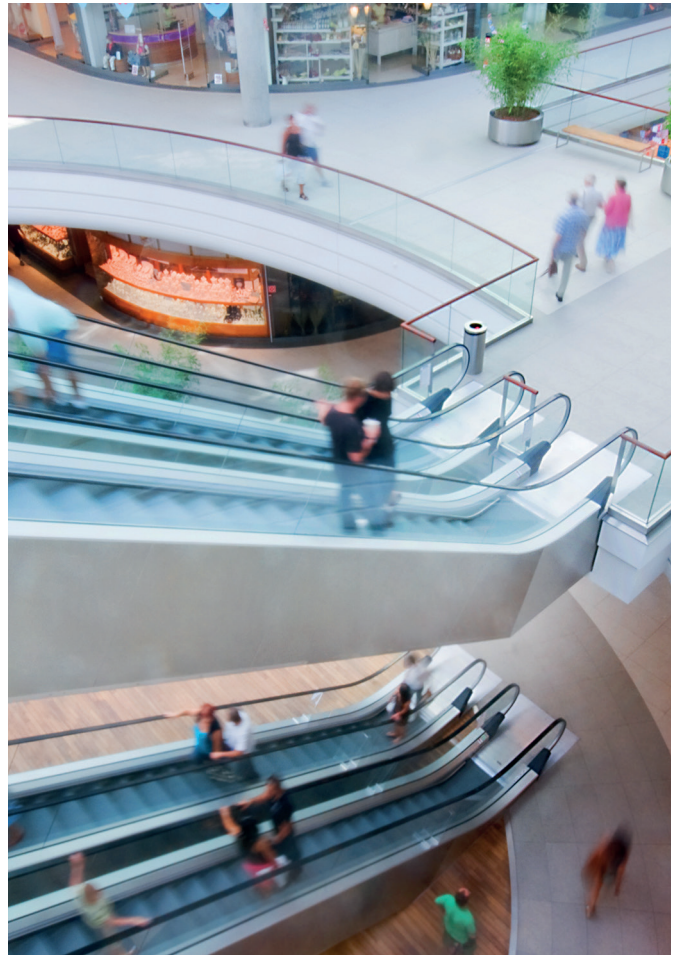

Look no further than MiniCam: a redeployable unit that houses a state-of-the-art HD camera and our proprietary bandwidth-reducing codec. Designed to get you streaming securely over cellular and fixed networks, the product reduces data usage and bandwidth requirements by up to 90%.

With end-to-end encryption for cyber security, edge storage, AI analytics and an IP66 rating, you can rest assured that your investment is protected from tampering and the elements.

With MiniCam, you can reliably stream real-time video across cellular networks. The device even works over LANs, WANs and fibre, resolving issues where fixed networks are overloaded by real-time video streaming.

The MiniCam works seamlessly with Vodafone's Connected Spaces Vision platform, which comes with unlimited connectivity for event based monitoring. This delivers maximum performance and versatility from a fully re-deployable system.

**Realise immediate & long-term ROI with reduced data costs.**

# A reliable camera in any event.

## Use a cost-effective setup

With MiniCam, there's **no need to install new street furniture or complicated hardware**. And unlike other solutions, there's no need to dig up the street, either. Everything you need is inside the enclosure, which uses universal mountings to attach to its new home.

Our bandwidth-friendly technology ensures you can reliably stream over wireless connectivity, saving thousands per camera. Simply install, switch on and you can be up and running in minutes.

## Monitor events, facilities or incidents

Thanks to the mobility and disruption-free installation of MiniCam, the **camera can be rapidly deployed to almost anywhere** — from large-scale sporting and cultural events to highsecurity buildings, vulnerable sites or critical response scenarios.

## Harness PTZ so you don't miss a thing

MiniCam is a **360-degree PTZ camera with an incredible 12x optical zoom**. And with 1080-pixel resolution, you won't miss a detail — providing you with a robust and reliable eye in the sky.

# Robust, redeployable, revolutionary.

## Features

- An all-in-one lightweight and compact design.
- High-quality, real-time video and audio streaming over wireless and fixed networks.
- Automatic bandwidth allocation adjusts video quality to the available bandwidth.
- Highly secure end-to-end encrypted video.
- IP66 rating ensuring protection against the elements.
- 360-degree PTZ 1080-pixel camera with 12x optical zoom.
- Up to 2 TB of on-board video storage.

## Integration and compatibility

- Scales to unlimited cameras and users.
- Enables multi-device management with flexible support for mobile, wireless and fixed endpoints.
- Offers on-board analytics, which can be applied to video streams to enhance visibility.
- Complies with NDAA requirements.

## Benefits

- Facilitates quick and easy installation with minimal disruption.
- Detaches easily for straightforward redeployment in another location.
- Reduces costs associated with data transmission and storage.
- Helps to improve response times and strategic deployment of personnel.
- Enables real-time consultation from operations centres to field-based staff.
- Increases visibility, helping to put key decision-makers in control.
- Enhances employee efficiency by prioritising operator time and attention.
- Improves transparency of operations, compliance and safety regulations.
- Eliminates the need for costly fixed infrastructures.
